Turkmenistán cambia a la energía solar para uso doméstico

Resumen

En los últimos años, se han desarrollado proyectos para la construcción de parques solares y plantas eólicas en diferentes regiones de Turkmenistán, con el objetivo de diversificar la matriz energética del país y reducir su dependencia de los combustibles fósiles. Are renewables the cheapest source of energy in Turkmenistan?

As the costs of solar panels and wind turbines have fallen dramatically in recent years, renewables now represent the cheapest source of new electricity generation in many parts of the world. No data for Turkmenistan for 2022. Renewables also have an important role in providing heat for buildings and industrial processes.

How to assess wind energy resources in Turkmenistan?

To assess wind energy resources within Turkmenistan, wind speed values at different heights are used. Wind directions, repeatability, strength and speed were determined.

How will Turkmenistan transition to a digital system?

The support for this process is directed by the Decree of the President of Turkmenistan adopted in 2020, which approved the "Program for the Transition of the Sphere of Science in Turkmenistan to a Digital System for 2020-2025", highlighting the tasks of ensuring the integrity of academic science, higher education and production.

How can Turkmenistan decarbonise?

New techniques and technologies will be needed to decarbonise these areas. Turkmenistan's government is continuously investing in oil and gas, to modernise and expand the electricity and heat sector by 2020. Moreover, the energy sector is almost fully subsidised, with citizens receiving free electricity, heat and gas up to a cer
